

**Join us as a Vascular Technologist at Ng Teng Fong General Hospital (NUHS)!**

A Vascular Technologist performs ultrasound and blood pressure studies to investigate the arteries and veins in all parts of the body. We work closely with the Vascular Surgeons to diagnose vascular disease, thus helping in the planning and management of a patient's treatment.

As a **Vascular Technologist** you would be expected to:

- Perform vascular pressure studies e.g. ankle/brachial pressure index study (ABPI), toe/brachial pressure study index (TBI)
- Perform vascular ultrasound studies e.g. arterial duplex, carotid duplex, venous reflux scans
- Generate reports on the findings of the above investigations

You can expect to be integral part of a team approach to the diagnosis and management of arterial and venous disease. You will be working in a supportive environment and with the scope to further your training and skills. You will enjoy autonomy and responsibility to manage and organise your time for scans and reports. There is the opportunity to participate in regular feedback sessions with the entire team.

**Job Requirements**

- Minimum 2 years' experience in Vascular or General Medical Ultrasound
- Bachelor's Degree in Medical Technology / Biotechnology / Biomedical Science, or Diploma or Bachelor's Degree in Diagnostic Radiography or its equivalent
- Passion to serve patients and be involved in their treatment
- Can-do attitude!
- On-the-job training will be provided
